

SOFTWARE INSTRUCTIONS (v3)

AMBIENT Instructions

Thank you for your purchase of AMBIENT. This is an exciting piece of software designed to help you to explore new avenues of sonic possibility.

Simply load up your chosen sound and AMBIENT will be ready to deconstruct and redesign your sound.

Read below for some key settings to check out – in order to get into the module:

- 🕒 Check your settings and make sure your soundcard and channels are correctly set up.
- 🕒 Whilst in settings ensure Audio is set to “On”.
- 🕒 Load up a sound from your computer (aiff or wav – no MP3s).
- 🕒 Ensure the amplitude dial (bottom right) is set in between 1 & 2.
- 🕒 Move up to the 3rd row of dials to the filter row. Set a filter that allows your sound through – stay away from the low-pass filter to being with.
- 🕒 Experiment with different pitches and grain sizes.
- 🕒 Consider the impact of reverb on your sound.
- 🕒 You can get a smoother, more detailed / less stepped sweep on the dials by holding down the “shift” key.
- 🕒 Use the presets function to save or recall your favourite settings.
- 🕒 Use midi learn to link the module to your hardware controller.
- 🕒 When you are happy with the result you can save the sound as an audio file and import it into your favourite DAW for further compositional work.
